Direct Submission Submitted (25-NOV-2002) Motoaki Seki, RIKBN Genomic Center; 1-7-22 Sushiro-cho, Tsurumi-ku, Yokohama, K. 230-0045, Japan (E-mail:mseki@gsc.riken.go.jp, UKL:http://pfgweb.gsc.riken.go.jp, Tel:81-45-503-96 Fax:81-45-503-9586, An Arabidopsis full-length cDNA library was constru an Arabidopsis full-length cDNA library was constru an reported previously (Seki et al. (1998) Plant J. Seki et al. (2002) Science 296:141-145). cDNA cleav and Xhol was ligated to modified Lambda FLC-1-E vec al. (2001) Genomics 77:79-90) digested with BamHI a This clone is in a modified pBluescript vector.	FEATURES Location/Qualifiers 1. 1250 FORTHER I. For the latest information on annotation of this clone, please see
Attainilarity to proteins in the databases are described in
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/Grail-1.3/),
ERNSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
NetGene2 (S.M. Hebsgaard, et al., CES, Technical University of
Denmark, http://www.cbs.dtu.dk/services/NatGene2)) and
Splicebredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/cgl-bin/sp.cgl),
http://genme.wustl.edu/eddy/tRNAscan-SE
(Sean Eddy, Washington University School of Medicine, St. Louis,
http://genome.wustl.edu/eddy/tRNAscan-SE
(Sean Eddy, Washington University School of Medicine, St. Louis,
fins sequence may not be the entire insert of this clone. It may be
shorter because we remove overlaps between neighboring submissions.
The 5' clone is MDF20 and the 3' clone is MYN21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /translation='MSDKRRPLPKKGEWDVNDPASAEGFTVIFNKARDEKKTGGKPGS

It currently
consists of 1 contigs. The true order of the pleces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

Coding seqences below are the result of integration and manual review of the following data: computer analysis using the program Genefinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuji Kohara (http://www.ddbj.nig.ac.jp/c-elegans/html/CE INDEX.html) and The C. elegans ORFeome cloning project (http://worfdb.dfci.harvard.edu/), similarity to other proteins from BlastX analyses (http://blast.wustl.edu/), sequence conservation with C. briggsae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans GenBank submissions, and personal communications with C. elegans researchers. tRNAs are predicted using the program tRNAscan-SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            complement (join(2833. .3009,3493. .3611,4382. .4491,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The 5' clone is Y45G5AL, 3000 bp overlap; the 3' clone is Y45G5AR, 2300 bp overlap.
                                                                                                                                                                                                                                                                                                                                                                                                                            Genome Sequencing Center

IICE: This sequence may not be the entire insert of this clone. may be shorter because we only sequence overlapping sections se, or longer because we provide a small overlap between neighboring submissions.

CDS

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

analysis see: http://www.wormbase.org/db/seq/sequence?name=Y71F9B;class=Sequence a graphical representation of this cosmid sequence and its

NEIGHBORING COSMID INFORMATION

The 5' cosmid is F32B5, 600 bp overlap; the 3' cosmid is W03D8, 300 bp overlap

Coding seqences below are the result of integration and manual review of the following data: computer analysis using the program Genefindar (P. Green and L. Hillier, personal communication), the large scale EST projects of Vuji Kohara (Communication), the (http://www.ddbj.nig.ac.ip/c-elegans/html/CE INDEX.html) and The C. similarity to other profess from BlastX analyses (http://blast.wustl.edu/), sequence conservation with C. briggsae (http://blast.wustl.edu/), sequence conservation with C. briggsae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans GenBank submissions, and personal communications with C. elegans esearchers. tRNAs are predicted using the program tRNAscan-SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).

/clone_wetcor: lambda Zip-Lox; Site_l: Sal; Site_2: Not;
Lambda PRL2 is a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1)
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
grown roots; 3) staged plants half with 24 hour light
grown roots; 3) staged plants half with 24 hour light
grown roots; 3) staged plants as 3 but aerial tissue (stems, flowers and
same plants as 3 but aerial tissue (stems, flowers and
siliques. The vector is BRL's lambda Zip-Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
oligo dT primed cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998).cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and Sall. rhis clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTACGGCGAGTTTAAATCCGGCAAGAAGTTGTTGATAAACCTCAACCGCGGAGACAGA 1058

Brassica oleracea
Bukaryota, Viridiplantae, Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;
rosids; eurosids II; Brassicales; Brassicaceae; Brassica.
I (Dases I to 784).
Town, C.D., Van Aken, S., Utterback, T., Koo, H. and Fraser, C.M.
Whole genome shotgun sequencing of Brassica oleracea

Claim 2; Page 11; 24pp; German.

This invention describes a novel nucleic acid encoding a plant nucleobase transporter (1). (1) is produced by complementation of a nucleobase transport (NBT)-defective host cell with a plant gene bank by selection of NBT-positive celle. (1) is used to isolate homologous sequences from bacteria, fungi, plants, animals and humans, for expression of the

     encoded protein (II) in prokaryotic or eukaryotic cells, for inhibiting expression of (II) (when in antisense orientation), and to produce transgenic crop plants. The transgenic plants have modified nucleobase transport properties, e.g. altered affinity and substrate specificity that may result in more efficient nucleobase transport in leaves, changes in a pical dominance, flowering behaviour and senescence, or improved distribution of pesticides. This sequence encodes the Arabidopsis thaliana PUP1 protein which is described in the method of the invention

This invention describes a novel nucleic acid encoding a plant nucleobase transporter (I). (I) is produced by complementation of a nucleobase transport (NBT)-defective host cell with a plant gene bank by selection of NBT-positive cells. (I) is used to isolate homologous sequences from bacteria, fungi, plants, animals and humans, for expression of the encoded protein (II) in prokaryotic or eukaryotic cells, for inhibiting expression of (II) (when in antisense orientation), and to produce transpenic crop plants. The transgenic plants have modified nucleobase transport properties, e.g. altered affinity and substrate specificity that may result in more efficient nucleobase transport in leaves, changes in apical dominance, flowering behaviour and senescence, or improved distribution of pesticides. This sequence encodes the Arabidopsis thaliana PUPI protein which is described in the method of the invention
